

Saleable®

Verification Router Service (VRS)

1 Saleable Returns

- Manufacturer Authentication
- 24/7 Access
- Sub-second Response Time

2 Look-up Directory

- GTIN Master Data
- Real-time LD Sync
- Product Acquisition

3 Verification & History

- Single Scan Verification
- Standard APIs
- FDA DSCSA Compliance

Saleable Returns

Saleable® is LSPedia's comprehensive 4.0 Verification Router Service, functioning as a platform, a network, and an application so that companies can verify serialized products with a single scan of the 2D barcode. Saleable® routes verification requests to the manufacturer's EPCIS serial repository for an immediate query and response. Saleable® not only works 24/7 but also offers sub-second response time for each transaction.

Look-up Directory (LD)

Saleable® consolidates all your LD records on your VRS network to access all the GTIN and GTIN Connection Information. The LD is synchronized daily in real time to keep the connection information up to date and to route verification requests to the correct data repository for a response.

Verification (Web and API)

Saleable® users initiate a verification by scanning a 2D barcode from either their warehouse systems or from LSPedia's web application at saleable.lspedia.com. Saleable® routes the verification to the manufacturer's serial data repository and retrieves the corresponding response.

Verification History

Saleable® also provides real-time verification status and audit trails so that users quickly can search the history for any specific transaction. Saleable® also allows users to sort and group the history data and export the history to business systems for analytics or FDA audits.

4 Digital RMA

- Single Scan RMA
- Realtime Rejection
- Refund Invoice Price

5 Dispensing

- Single Scan Dispensing
- Digital Inventory
- APIs for WMS and POS

6 Decommission

- Single Scan Decommission
- Cradle to Grave Unit Tracking
- Report to Manufacturer

7 Recall Notification

- FDA Recall System Sync
- Initiate New Notification
- Alert Trading Partners

8 ADR

- FDA WDD 3PL Database
- Maintain License Expiry
- Manage ADR Data Access

Digital Supply Chain

Saleable® is the most advanced interoperable digital supply chain platform companies can use to determine whether a serialized product is legitimate and saleable. This advanced VRS gives users increased supply chain efficiency, zero errors, unprecedented data visibility, and turnkey compliance with FDA regulations.

Digital Return Material Authorization (RMA)

Saleable® enables gives Authorized Trading Partners and Reverse Logistics Providers that ability to initiate a RMA with a single scan of the 2D barcode. The scanned product is verified, accepted as an RMA, and exported to the existing business system for refund at the original invoice price.

Dispensing

Saleable® allows you to verify product authenticity, stops the distribution of any recalled products, and captures the dispensing event with one single scan. Saleable® does not require cycle count or physical inventory – yet it shows the accurate count of your digital inventory in real-time. Saleable® integrates with your existing Inventory System, Dispensing System, and POS to balance inventory through standard APIs.

Decommission

Saleable® allows Authorized Trading Partners and Reverse Logistics Providers to scan and capture decommissioned products. The serial numbers are reported to the manufacturers as a decommissioning event. This keeps the disposed serial numbers out of the digital supply chain and away from the counterfeiters, eliminating risks that can rise from illegal activity.

Product Notification

Saleable® is fully integrated with the FDA Recall Enterprise System so that it protects patient safety by stopping any distribution of recalled products. Saleable® provides effective workflow to locate and quarantine any on-hand inventory under recall, of flagged as suspect or illegitimate. Saleable® also alerts trading partners so they can quickly remove the product in question from their distribution chain.

Authorized Trading Partner (ADR)

Saleable® also integrates with the FDA's WDD 3PL Database to provide a robust workflow for customers to add, maintain, and manage their Authorized Trading Partners. After selecting and creating a "My ADR" list, customers can monitor that list for license expirations, as well as managing ADRs' accesses to VRS.
